

Come face to face with a challenge in Research & Development

R&D European PhD Seminar

P&G

R&D European PhD Seminar

Would you like to learn more about Research & Development in a competitive and innovative fast-moving consumer goods business in one of the most successful companies in the world?

The seminar is open to Ph.D. Science or Engineering students, who will graduate by the end of 2013 at the earliest.

Procter & Gamble's R&D PhD Seminar is designed to give you the opportunity to see what a typical day of a Scientist or Engineer in R&D looks like and will give you some insights into the daily challenges of the business.

You will visit one of our European Innovation Centres and have ample opportunity to meet and talk with our R&D top managers and technologists to learn about their jobs, R&D and scientific research and programmes in P&G.

You will experience the innovative world of our R&D organisation and practise the skills needed to be successful. You will do this via a series of exercises and case studies working closely with other international students and trainers from P&G.

Accommodation, meals, and travel to and from the seminar are paid by P&G. Course language is English.

"The PhD seminar not only gave me a chance to learn about the company, what products they make, how they develop them and what job roles there are, it also gave me the opportunity to meet people who worked in R&D which meant I could also find out what the people and atmosphere would be like whilst working for P&G".

Caroline Quin

"Transition between academic R&D and the industry is not always easy but during the PhD seminar we had the opportunity to learn how is researching in a huge company as P&G. We discovered the innovation process in P&G and the main roles in the company, through dedicated speeches and workshops. Needless to say the connections I did during these days are today the core of my contacts network in P&G."

Sergio Rodriguez

"The PhD seminar allowed me to understand the many roles of R&D within P&G. It gave me the opportunity to meet with R&D personnel across several functions and highlighted the exciting opportunities which would be available. The seminar offered a unique insight into the work of a Scientist and allowed me to discover the areas that appealed to me".
